Date	05/10/2022
Team ID	PNT2022TMID33407
Project name	Real-Time water quality monitoring and control system

SOLUTION ARCHITECTURE:

PROJECT DESCRIPTION:

- River water quality can be monitored by the web application
- The web application and the user are interfaced
- The PH level and the temperature of the water can be monitored
- If the water quality is not good then the authorities get alerted by the message.
